[Chemical warfare - Wikipedia](#)

Chemical warfare (CW) involves using the toxic properties of chemical substances as weapons. This type of warfare is distinct from nuclear warfare and biological warfare, which together make up NBC, the military acronym for nuclear, biological, and chemical (warfare or weapons), all of which are considered "weapons of mass destruction" (WMDs). None of these fall under the term conventional Chemical Warfare Agents and Use of Thermal Desorption GC ...

Chemical warfare is defined as "Warfare and associated military operations involving the employment of lethal and incapacitating munitions and agents, typically poisons, contaminants, and irritants." This definition only covers deliberate use of agents and excludes most of those used legally, such as herbicides, smoke, and flame. An exception to this is the use of riot-control agents during Chemical weapons in World War I - Wikipedia

The widespread use of these agents of chemical warfare, and wartime advances in the composition of high explosives, about 85% of the 90,000 deaths caused by chemical weapons during World War I, 1916: Austrian use, Italian dead after the Austrian gas attack on Monte San Michele. On 29 June 1916, Austrian forces attacked the Italian lines on Monte San Michele with a mix of phosgene and
