Chronic venous disease is a problem that affects the veins of the legs. Normally, the leg veins carry blood back to the heart. In people with chronic venous disease, the veins do not work well. This can cause blood to collect in the lower legs and feet. People with chronic venous disease often report that their legs feel heavy, tired, or achy.

[Chronic venous insufficiency - Wikipedia](#)

Chronic venous insufficiency is a medical condition in which blood pools in the veins, straining the walls of the vein. The most common cause of CVI is superficial venous reflux which is a treatable condition. As functional venous valves are required to provide for efficient blood return from the lower extremities, this condition typically affects the legs. If the impaired vein function causes significant symptoms, such as swelling and ulcer formation, it is referred to as chronic venous disease.
