This book introduces formal semantics techniques for a natural language processing audience. Methods discussed involve: (i) the denotational techniques used in model-theoretic semantics, which make it possible to determine whether a linguistic expression is true or false with respect to some model of the way things happen to be; and (ii) stages

Semantics. Reference and sense. The reference of a word is the relation between the linguistic expression and the entity in the real world to which it refers. In contrast to reference, sense is defined as its relations to other expressions in the language system. Thus, there are words that have a sense, but no referents in the real world. Other words may differ in sense, but not necessarily in
