Tympanic membrane retraction - Wikipedia

Tympanic membrane retraction describes a condition in which a part of the eardrum lies deeper within the ear than its normal position. The eardrum comprises two parts, the pars tensa, which is the main part of the eardrum, and the pars flaccida, which is a smaller part of the eardrum located above the pars tensa.

Surgery for tympanic membrane retraction pockets | Cochrane

A retraction of the tympanic membrane happens when all or a segment of the membrane collapses inwards towards the middle ear. Tympanic membrane retractions are commonly managed by ENT surgeons but there is currently no consensus as to the indications, timing and options for management of this condition.

Treatment of tympanic membrane retraction pockets by ...

The treatment of tympanic membrane retraction pockets by simple excision is described in 66 ears in 50 patients. After one operation 65 per cent of the retraction pockets were successfully treated (mean follow up 14.1 months). Persisting perforations occurred in five patients after one excision.

Tympanic membrane retraction pockets | Private Healthcare UK

A tympanic membrane retraction pocket is a condition in which a part of the tympanic membrane lies deeper in the middle ear than is normal. It occurs as a result of negative pressure in the middle ear and is more common at a young age. Most common complaints are infected pockets causing deafness.

Retracted Eardrum - Treatment, Symptoms, Surgery, Causes

Mild tympanic membrane retraction: Tympanic membrane retraction in contact with incus or stapes (ossicles in middle ear) Tympanic membrane in contact with promontory wall: Tympanic membrane is adhered to promontory (adhesive otitis media) Grade III or IV with perforation of tympanic membrane: Another way to classify eardrum retraction is depending on the part which is retracted.

Retraction pockets in the tympanic membrane aetiology ...

Retraction pockets of the tympanic membrane are believed to be due to eustachian tube obstruction or malfunction. Our observations based on intraoperative findings suggest that the presence of a large sized mastoid antrum along with chronic eustachian tube obstruction plays an
